## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 612 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 612 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. ***Allowable Subject Matter***

Applicant has amended the claims so as to overcome *Bechtold* and, further, has correctly asserted that the publication date of the *Ueda* (and, in particular the publication date of the associated WIPO document) does not supersede the filing date of PCT/JP04/00525 on which this national stage application is based.

In an updated/modified survey of the prior art, the Examiner encountered Yokotsuka et al., U.S. Patent # 5,905,117. Yokotsuka discloses a polymer composition comprising (abstract) a resin (a) and a partial condensate (b) of an alkoxy silane, which the skilled artisan will appreciate contains hydroxyl groups by virtue of the hydrolysis of some silicon-bound alkoxy groups that are not subsequently condensed to provide a siloxane Si-O-Si residue. Exemplary of the resins (a) are the fluoropolymers (1) to (4) first briefly described in column 4, line 57 through column 5, line 3 and then in much greater detail in columns 5, 6, and 7. The fluorine resins contain functional groups of which carboxyl groups and hydroxyl groups are exemplary (column 6, lines 25-33, column 6, lines 55-59, and column 7, lines 15-18). Copolymers derived from TFE and vinyl monomers that introduce these groups are contemplated in column 7, lines 7-22. The alkoxy silanes from which the aforementioned partial condensates are prepared include those outlined in column 8, lines 35-55 with ones bearing fluoroalkyl substituents being preferred as they impart compatibility to the polyorganosiloxane condensate (column 8, lines 59-62 and column 9, lines 6-9).

In addition to these components, it is further taught that a coupling agent is incorporated to facilitate crosslinking between (a) and (b). See column 11, lines 35-44. Subsequently, they exemplify two scenarios where chemically-complimentary moieties are provided on the resin (a) and siloxane condensate (b) or coupling agent (c). See column 12, lines 1-16.

As can be seen from this description, the reference nearly anticipates at least that embodiment of the invention where the fluorine-containing resin has a carboxyl group and the stain-proofing compound is an amino-functional polysiloxane. However, whereas the claims require that component be a polydialkylsiloxane, the reference actually teaches away from using this class of silicone polymer because the mechanical properties are inadequate. See column 8, lines 27-34.

Weinert et al., U.S. Patent Application Publication No. 2004/0109947 is of some interest for its disclosure of a composition containing materials corresponding to components (A) and (C) but there is no mention of a compound that correlates with claimed component (B) nor is it clear why the skilled artisan would be motivated to introduce this component.

These and the references cited in earlier stages of prosecution represent the most germane prior art known. To the extent that they fail to even render obvious the instant invention, claims 45-47 and 49-52 are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MARC S. ZIMMER whose telephone number is (571)272-1096. The examiner can normally be reached on Monday-Friday 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
